Recipe Searcher App (2022)

Developed an mobile app using Java and Android Studio, integrated with Firebase, to search and tailor recipes focusing on lower calorie and lower cholesterol foods. The project enhanced proficiency in Java programming, Android app development, and Firebase for real-time data management and user authentication.

JSON File Formatter (2025)

Developed a Blazor Web Assembly app, that allows users to upload multiple files to be formatted and edited when there are errors. I made this because, I myself had struggled to find an online app that would allow me to format and edit multiple JSON files, leaving me to code a console app to process JSON which took up time.

EXPERIENCE

Bidvest International Logistics Graduate Developer
January 2023 - January 2024

I've led enhancement of internal applications and the development of new solutions using C#, SQL and Blazor. I've delivered timely web applications that meet and go beyond business requirements. I always made a point of upholding high development standards, prioritizing documentation and planning, adhering to IT architecture guidelines. During my time there I fostered collaboration, team contributions, efficiency and smart work. I am committed to personal growth and I always kept on learning new skills and ways of thinking that I incorporate to this day.

Cape Peninsula University of Technology
Game Development Intern
July 2022 - December 2022

Created game levels in Unity, integrated mechanics and assets smoothly. Composed original music and sound effects using Fruity Loops for immersion. Developed efficient C# code for game features and optimizations.

EDUCATION

Cape Peninsula University of Technology
Diploma in Information Communications Technology
2020-2022

Wits Business School
Power Skills Training
2023

EXPERTISE

- Agile Development
- Documentation
- Source Control (Git)
- C# and .NET, SQL
- ReactJS, Blazor
- HTML, CSS and JS
- IIS, DevOps, Azure
